

EcoPart 410 Ground-to-water Heat Pump

Main features	
Application	space heating and hot water heating
Description	heat pumps extract energy from ground; this energy gained from deep bores or ground collectors is then "pumped" to a higher temperature and transferred into heating water; the flow temp. may reach up to 65 °C
Installation ¹⁾	brine circuit surge tank and brine circuit filler kit are included in the delivery, installation shall be done with Pump Station Kit w. Smart Controller (for codes see Catalogue)
Working fluid	R407C (refrigerant), antifreeze fluid (brine circuit), water (heating system)
Certification	HP Keymark – European Committee for Standardization quality label
Code	12649

1) In case of installation in series, the first heat pump in series shall be installed with Pump Station Kit w. Smart Controller, all the heat pumps following in series shall be installed with CSE TC W PWM pump station (for codes see Catalogue).

(*) For heat pump space heaters and heat pump combination heaters, the rated heat output P_{rated} is equal to the design load for heating $P_{designh}$, and the rated heat output of a supplementary heater P_{sup} is equal to the capacity for heating $sup(Tj)$.

(**) If C_{dh} is not determined by measurement then the default degradation is $C_{dh} = 0,9$.
